Dept. of Transportation, Federal Aviation Administration: For sale by the Supt. of Docs. , U. S. G. P. O. , 2005. OCLC Number: (OCoLC)270761695 Subject: Airframes -- Fatigue. Excerpt: . . . 9 29 05 AC 23-13A 2-5. How were the load spectra in Appendix 1 developed a. The FAA developed the flight load spectra in Appendix 1 based on a statistical analysis of the data presented in Reference 2. We used the ground load spectra directly from Reference 3 for the Appendix 1 ground load spectra. b. The Appendix 1 flight load spectra include an increment ( 1. 5 standard deviations ) added to the average measured load frequency. The increment accounts for the variability in loading spectra experienced from individual airplane to airplane. The magnitude of the increment was selected to maintain the probability that a component will reach its safe-life without a detectable fatigue crack established by the scatter factor ( see paragraph 2-15 ). Reference 4 provides additional details on the development of the Appendix 1 flight load spectra. 2-6. Can I use other loading spectra in place of the Appendix 1 spectra The Appendix 1 spectra are the FAAs approved load spectra for use in small airplane fatigue evaluations. Applicants may propose alternate spectra in certain situations. If an applicant proposes alternate spectra, the Small Airplane Directorate Standards Office must approve these spectra. Any spectrum proposed by an applicant should maintain the probability that a component will reach its safe-life without a detectable fatigue crack established by the scatter factor ( see paragraph 2-15 and Reference 4 ). Situations in which applicants might consider alternate spectra include the following: a. The applicant may develop gust...
